B
C
D
Error variance
$m_\times$
$v_R$
Estimation target
Target 2: $\bar{R}$
Target 1: $R_t$
Simulation
Expected reported cases per period, $m$ (cases)
Ancestor scale
$n = 40$
$n = 200$
$n = 1000$
Reporting probability, $\rho$
Contours: balance scale, $m_\times$ (cases)
200
100
50
20
10
Baseline
Offspring dispersion, $k$
Environmental variance, $v_R$
