A
Error variance
10^0
10^{-1}
Reporting volatility
$\tau = 0$
$\tau = 0.1$
$\tau = 0.15$
$\tau = 0.2$
10^0
10^1
10^2
10^3
Expected reported cases per period, m (cases)
B
Balance scale, $m_{\times,H}$ (cases)
60
50
40
30
20
10
$m_\times$
$\tau = 0.15$
0.00
0.05
0.10
0.15
0.20
0.25
0.30
0.35
0.40
Relative reporting volatility, τ
C
Optimal volume, m^* (cases)
10^2
10^1
Balance scale
$m_\times = 21.3$
$m_\times = 49.2$
10^0
10^1
10^2
10^3
Cost ratio per period to per case, c_0/c_1
D
Mean squared error
0.035
0.030
0.025
0.020
0.015
0.010
0.005
0.000
Reporting volatility
$\tau = 0.15$
$\tau = 0$
Extra budget spent on
More volume per period
More periods
1
2
3
